

Walk Score™ uses a patent-pending system to calculate the walkability of an address based on:

- The distance to walkable locations near an address.
- Calculating a score for each of these locations.
- Combining these scores into one easy to read Walk Score.

A location's Walk Score is a number between 0 and 100. The walkability of an address depends on how far you are comfortable walking—after all, everything is within walking distance if you have the time. Here are general guidelines for interpreting a score:

**90 - 100 = Walkers' Paradise:** Most errands can be accomplished on foot and many people get by without owning a car.

**70 - 90 = Very Walkable:** It's possible to get by without owning a car.

**50 - 70 = Some Walkable Locations:** Some stores and amenities are within walking distance, but many everyday trips still require a bike, public transportation, or car.

**25 - 50 = Not Walkable:** Only a few destinations are within easy walking range. For most errands, driving or public transportation is a must.

**0 - 25 = Driving Only:** Virtually no neighborhood destinations within walking range. You can walk from your house to your car!

The following Walk Scores for public schools in Clark County were tabulated in January 2008 using the tool available through [www.walkscore.com](http://www.walkscore.com). The tabulations were done as a part of the *Walking: All Reasons All Seasons* campaign.

- The scores rate the number of walkable destinations from a school's address. Destinations include recreation, retail, residential, and schools.
- The rating does not reflect the walkability of potential routes around a school, such as the presence of sidewalks, bike lanes, or lighting.
- If you are searching for a home in a walkable neighborhood, it is always best to visit and see for yourself. To find the Walk Score of a specific residential address go to [www.walkscore.com](http://www.walkscore.com)
